NON FUNCTIONAL REQUIREMENTS

- Technical Constraints
 - o PHP and MySQL for the backend;
 - o HTML and JavaScript (vanilla) for the frontend.
 - o No Framework: The use of Node.js, React, Express, Angular, or template engines like Twig or Blade is prohibited.
 - o No CAPTCHA: The delivery explicitly specifies not to use them.
 - o Email: Recovery emails must be sent (you could use libraries like PHPMailer, which is allowed).
- Format constraint
 - o Lyrics uploaded as text and visualized on browser
 - o Audio uploaded as mp3 and downloaded by users
- Security and Defense
 - o The project must be protected against all attacks discussed in class. In particular:
 - o Logging: Every relevant event (failed logins, administrative access, suspicious errors) must be saved in a log file for post-incident investigation. (don't implement a real-time attack alerts)
